## B. Chapelco RocketLauncher

If you are new to Joomla, we have RocketLauncher packages which are provided as an additional option to the template. RocketLauncher is a customized Joomla install, that installs a replica of the demo onto your site - inclusive of sample data, content, extensions, the template and sample images.

- **RocketLauncher must be installed as new, and not over an existing Joomla install.**
- **We also recommend you to install RocketLauncher on your localhost and use it as a reference.**

***Note:** All sample content images will be replaced with blank versions in the RocketLauncher version.*

## How to Install Chapelco RocketLauncher

### 1. Upload

- Download the RocketLauncher (rt\_chapelco-rocketlauncher.zip)
- Unzip the rt\_chapelco-rocketlauncher.zip
- Upload the files to your server

***Note:** You can upload all the files via FTP, or use cPanel or SSH to upload the zip and unzip directly onto the server. Enquire with your hosting provider.*

### 2. Installation

- Go to [http://www.yoursite.com/rt\\_chapelco-rocketlauncher](http://www.yoursite.com/rt_chapelco-rocketlauncher)
- Follow the installation instruction which is basically same with regular Joomla installation
- The sample data will be installed automatically on RocketLauncher installation
- Remember your administrator "username" and "password" you set during the installation
- Delete the **/installation** directory on your server

## C. Chapelco Template Installation

Please go to Chapelco Download Area and download the necessary files required for the template to function:

- Template (Standalone) rt\_chapelco.zip

***Note:** If Gantry Library has been installed at /components/com\_gantry, please install the Standalone Template.*

- Template (Bundle) rt\_chapelco-bundle.zip

***Note:** The Bundle Template is only necessary if the Gantry Library is not installed at /components/com\_gantry.*
