

Here is what's been added/changed :

1. Support for unlimited number of banners of the same size / page.

Configure instance A, publish.

Copy instance A -> B and reconfigure, publish on the same page.

2. Plugin code has been changed to (see picture) :

{nrp}size|id{/nmap}

3. Various improvements.

The screenshot shows the configuration interface for the 'ProJoom Multi Rotator' plugin. A callout box points to the 'ID' field, which contains the value '48'. The callout box contains the following text:

While setting the plugin, note the ID and the size.

example :
{nrp}468x60|48{/nmap}

The interface includes the following sections:
