

Logo Editing

Gantry sets the dimensions of the logo, so CSS modification is unnecessary.

Logo Editing Requirements

- **Adobe® Fireworks:** CS5 is preferred, but CS3/4 will be sufficient.
- **Logo Font:** Download and install before proceeding to edit in Fireworks.
- **Source File:** Download the **logo-source.png** file from the rt_zephyr_j15-sources.zip package.

Step 1 - Open the File

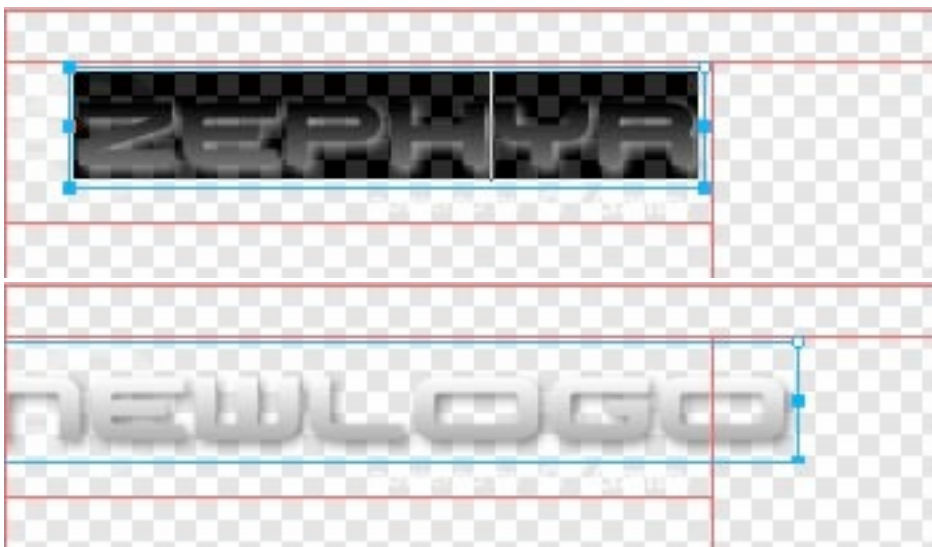

- Open the **logo-source.png** file in Adobe® Fireworks.

- Focus on the right column, titled **Layers**. Select the **Web layers** directory and click the eye icon to the left of the logo slice (the green object). This will make the slice invisible so you can edit the file.

Step 2 - Text/Slogan/Icon Editing

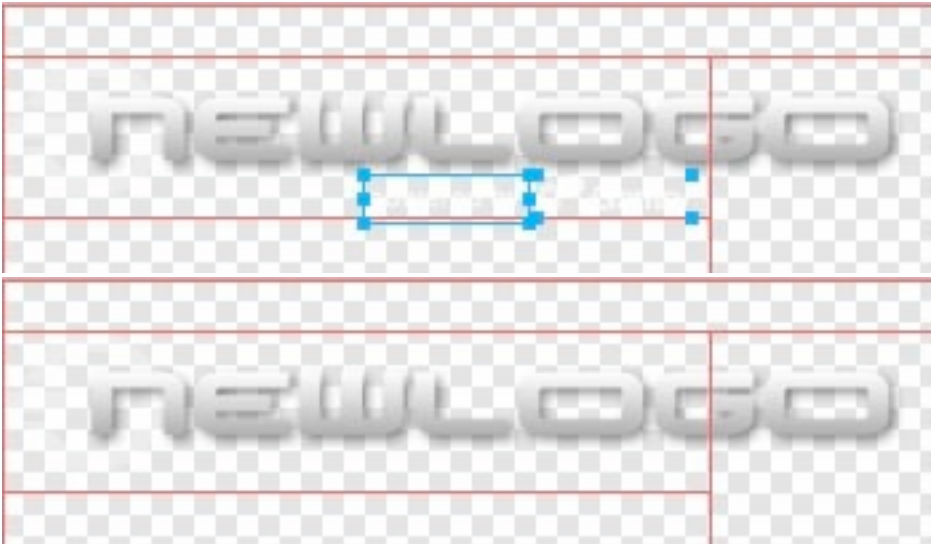

- Double click on the logo text. Now you can edit the text of logo to your choosing.

- If necessary, move the location of the logo text.

- Select the slogan and disable/edit it as you wish.

- Now, select the icon and disable/edit it as you wish.

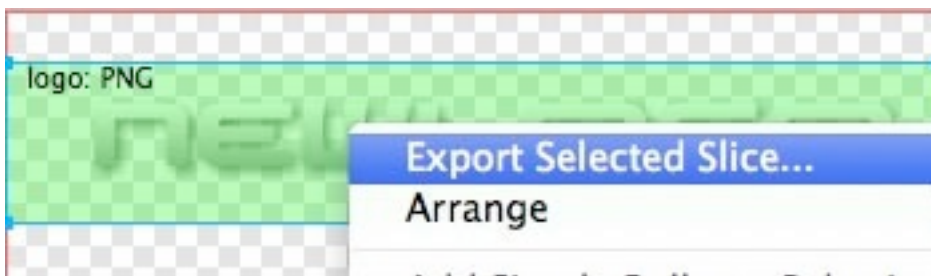

Step 3 - Slice Modification

- Reactivate the Slice in the Web Layers column, this will place a green rectangle over the logo image. Change the size of the slice (or move it) to match the new size if applicable.

Step 4 - Export

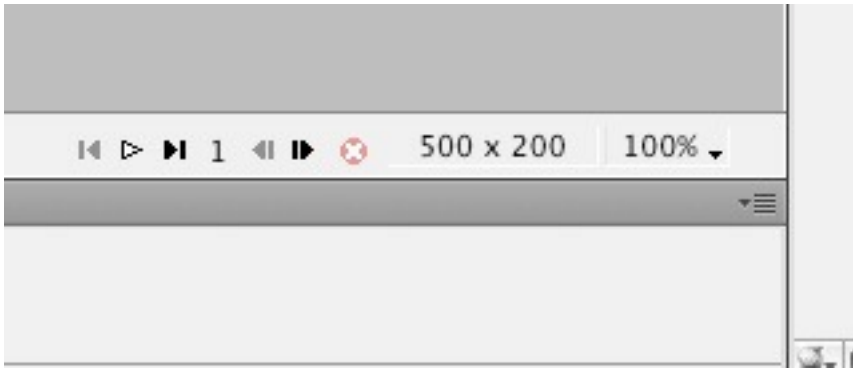

- Now you will want to export the logo. Right click on the image slice and select **Exported Selected Slices...** from the contextual menu. Proceed to export it to your computer for uploading.

Step 5 - Multiple Frames/States

- If there are multiple logos for a template, they are located in **Frames** or **States** within Fireworks.

PAGES	STATES	LAYERS	
<input checked="" type="checkbox"/>	1	Style1	7 ○
	2	Style2	7 ○
	3	Style3	7 ○
	4	Style4	7 ○
	5	Style5	7 ○
	6	Style6	7 ○

Step 6 - Uploading

- Upload **logo.png** to the **/templates/rt_zephyr_15/images/logo/*style*/** directory
- Clear your browser cache and refresh your site.
- If you cannot see your new logo, ensure you have uploaded it to the right directory and that the directory permissions are writeable. Enquire with your hosting provider.
